

Free Exit Systems

Free Exit Has Never Been Easier

Maximize the value of every automatic gate and bring convenience to clients by adding free exit to every gate operator.

Easily Add Convenience

With free exit, there is no need for clients to let visitors out, punch a key pad or use a remote when exiting the property. With our systems, the gate will be open before they reach it.

Three to Choose From

We offer three professional systems to meet all your free exit needs. And you don't have to dig up the driveway or cut into road surfaces to install them.

Don't Dig up That Driveway!

Each system includes a sensor probe that is buried *beside* the driveway, eighty feet from the gate operator. It will cover a twelve foot wide drive from the side.

No False Alarms

When vehicles approach the hidden probe, the gate will open. The probe only detects moving vehicles, so you don't need to fear the gate opening mistakenly.

CT-2BG System

The CT-2BG includes an external board that fits in the gate operator and features probe sensitivity and relay time adjustments.

CP-1RB System

The CP-1RB has the lowest current draw in the industry. This, along with the size of its external, adjustable relay board (2½ square inch) makes it a perfect match for solar power applications.

CP-2 System

The CP-2 free exit system is self-contained. It has no external circuit board and hooks directly to the trip input of the operator. It accepts universal voltage and draws its low current requirements directly from the gate operator.

With these three systems to choose from, free exit cannot get any easier.

All products are made in the U.S.A. and carry a full five year warranty.

Manufactured by:

 **Preferred Technologies Group**
Sold thru fine distributors nation-wide.
